

Group: Together4Ever
Date: October 8, 2018
Chair: Alex Solberg
Secretary: Tobias Lindroth
Participants: Viktor Franzén, Tobias Lindroth, Spondon Siddiqui, Alex Solberg

1 Objectives

Decide who should send the leave/join messages
Decide which improvements need to be made to the GUI
Decide if we should use STAN

2 Reports

Spondon: Thought about the GUI
Viktor: Has worked with the SDD.
Alex: Gained knowledge about JUnit-Quickcheck and refactored the code.
Tobias: Tried to test with QuickTheory.

3 Discussion items

Discuss whether the user or a ghost user will send the leave/join messages
Discuss which improvements need to be made to the GUI
Discuss if we should use STAN

4 Outcomes and assignments

We decided that the users should send leave/join messages.
The user needs to be able to press enter to send a message. The channel pictures needs to be smaller. A channel list item should be highlighted when the user hovers over it and when the user presses on the channel list item the textfield should gain focus. The anchorpanes in the two panel selectors should have a minimum and maximum size. Change the java logo to our Wack logo.
We decided that we will try STAN and compare it to IntelliJ's test tool. If STAN isn't a lot better we will use IntelliJ.

Assignments: Viktor will implement the leave/join message functionality and will also create a MessageFactory. Alex will create new message content types. Spondon will improve the GUI and connect continue connect the controllers with the model. Tobias will connect the controllers with the model.

5 Wrap up

The next meeting will be held Thursday 11/10 12:00 in EG-3508.
