

Group: Together4Ever

Date and time: 2018-09-05 12.00

Chair:

Participants: Alexander Solberg, Spondon Siddiqui, Tobias Lindroth, Viktor Franzén

#Objectives

No previous goals – first meeting

#Reports

No previous meetings

#Discussion Items

1. What should the project be about?
2. Usage of trello or GitHub Projects
3. Usage of Javadoc
4. Roles

Outcomes and assignments

- Outcomes from discussion items. Write down what's decided and why it was decided. Sync with other documentation (add terms to wordbook).
- (re)Assign to each group member which issues to solve.

A chat application was deemed to be an appropriate project. The reason being that a chat application can be expanded with added functions. At first the chat won't be able to:

- save messages
- send files
- send images
- show a picture of the person you are speaking with

These functions, and more, will be added later on. This makes vertical slicing easier, and also makes it so the customer can be shown an early version of the product.

We have decided to use Trello over GitHub, mainly because we have some experience with it already. A new board has been set up with the columns Stories, To do, In progress, Testing, and Done.

JavaDocs will be used. We are to comment our code and generate JavaDocs afterwards. Comments will be used mainly for methods, too many comments will just bog down the code.

As for roles, we will ponder on it further and decide upon roles the next meeting. Preliminarily, we have decided upon Graphics Designer, Software Leader, and Project Leader

Wrap up

- Write down any unresolved issues for next meeting.
- Decide a time and location for next meeting.

The next meeting will be held Thursday 6/9 at 12.00 below HC
