

Group: Together4Ever  
Date: October 22, 2018  
Chair: Alex Solberg  
Secretary: Tobias Lindroth  
Participants: Viktor Franzén, Tobias Lindroth, Spondon Siddiqui, Alex Solberg

## 1 Objectives

Complete a plan for how we will present the information from the SDD.

Plan how we will present the application and show the user stories' functionality.

## 2 Reports

Tobias: Written finishing touches for SDD and edited the whole document to make sure its correct. Also implemented the kick function

Spondon: Added final images to the RAD document and wrote about them. Also implemented the kick function.

Viktor: Changes the message class so that it is represented in a different way. The message class now has different enum types to support leave, kick, and join.

Alex: Wrote a bit on SDD chapter 3. Added non-functional requirements to new user stories in RAD and wrote missing tests to get 100 percent code coverage.

## 3 Discussion items

Discuss how we will present the information from the SDD.

Discuss how we will present the application and show the user stories' functionality.

## 4 Outcomes and assignments

After discussing how we will present the information from the SDD in our project presentation we determined that we would create a powerpoint. We will try to avoid writing too many words on the slides and instead have images which show diagrams. Then we will talk about them in detail.

For the other part of the program presentation we need to demo the application and show the functionality for each of our user stories. We determined that

we would go through each of our user stories and present the the program in a chronological order accomplishing our requirements along the way. This means that we will have an alternate order for our user stories during the presentation, one that does not represent their priority.

Assignments:

All group members will work on the presentation and add information/images to their respective slides. Additionally, each group member will write a "rough script" of what we will say during the presentation.

We will also write the peer review for before 19 before the next meeting.

## **5 Wrap up**

No unresolved issues from this meeting.

The next meeting will be held on Thursday 25 October at 10am in EG- 3508
