Group: Together4Ever
Date: September 18, 2018
Chair: Alexander Solberg
Secretary: Tobias Lindroth
Participants: Viktor Franzén, Tobias Lindroth, Spondon Siddiqui, Alexander Solberg

1 Objectives

Decide whether we should use jdk 1.8 or 1.9

Decide if a database is needed.

Renew our roles.

Discuss our design model.

Decide what tasks we should have this week.

2 Reports

Spondon: Worked with tasks. Uploaded gui to github.

Viktor: Worked with tasks

Alex: Worked with tasks and uploaded rad v1.

Tobias: Created first version of design model.

3 Discussion items

Discuss jdk 1.8 versus jdk 1.9.

Discuss if we need a database or should store data locally.

Discuss which role Alex should have

Discuss how to develop the design model.

Discuss which tasks will be assigned to who.

4 Outcomes and assignments

We decided that Alex should try to make it work with 1.8. If he fails, we will use 1.9.

Assignment: Alex will fix 1.8 JDK on his workspace so he can continue working on the project.

We decided to store data locally because it's easier than using a database.

Alex new role will be project leader. He will be responsible for time management and making sure the tasks are complete.

We decided that the server should have users, not clients. We also decided that it's important to have some kind of check so that two users can't have the same name. We also decided that Message should have subclasses, for example TextMessage.

Assignment: Tobias will remove the relation between server and client and add a new relation between server and user, by adding a collection with users as a field in server.

We've added new tasks to Trello and specified who should do what. (See Trello for specific assignments)

General assignment: All assigned tasks on Trello should be in the test-phase before the next meeting.

5 Wrap up

Next meeting: Thursday 20/09-18 9:00 below hc/hb/rhodos.
