Group: Together4Ever
Date: 13/09/18
Chair: Viktor Franzén
Secretary: Alex Solberg
Participants: Alex Solberg, Spondon Siddiqui, Tobias Lindroth, Viktor Franzén

1 Objectives

1. Decide how we will write our tasks.

2. Determine if client and server will be in same source

3. Determine whether we will begin coding together next week

2 Reports

Spondon: Has uploaded a sketch of the GUI to GitHub.

Tobias: Worked on the user stories and domain model

Viktor: Worked on the user stories and domain model

Alex: Connected database to local server, worked on user stories

3 Discussion items

Discuss how we will formulate our tasks. (Size of tasks, amount of tasks per person, velocity)

Discuss whether the client and server will be separate source files or combined in one project

Discuss how we will begin coding our product. Pair programming? individually? together in a room?

4 Outcomes and assignments

After a lengthy discussion we have decided that it is best to ask our supervisor for advice regarding our first two discussion items.

As this is the beginning of the project we will preferably work together in a room so we can have an open discussion. This will help us all get a overview of

the project's process and goals. However, we have decided to work individually with our separate tasks in the room.

Assignments include thinking about the tasks and if they seem reasonable write them down on our dashboard in Trello. Additionally, we will continue prototyping within our individual roles.

5   Wrap up

As aforementioned we will need to discuss certain points with our supervisor as we're unsure how to properly write tasks. Secondly, the objective regarding servers and clients is unresolved and needs further discussion.

We will have our next meeting on Tuesday (18/9) at 10am in EG-5207.
